Abstract (en)

[origin: EP0617904A1] The present invention relates to a dispensing package for pasty, stick-like products. This package, which is essentially made from synthetic material, includes a hollow body (2) inside which the pasty stick is guided in a longitudinal direction (X-X'), a device (6) for displacing the stick, consisting of a sliding piston to which the stick is secured and of a screw capable of displacing the piston, a thumb (knurled) wheel (7) for driving the screw (62) in rotation, mounted at one end (27) of the body (2) opposite a cap (5) for closing this body, and is characterised in that the body comprises, on the one hand, an internal lining (3) which defines the two longitudinal ends (825, 27) of the body and which is produced in an elastically deformable material compatible with the pasty product, as well as an external sleeve (4) which partially surrounds the said lining and which is assembled therewith with the aid of means formed together (in a single piece) with it (431, 433, 437). This package makes it possible, for example, to package hygiene (health) or cosmetic products, such as deodorant or, for example, lipstick. <IMAGE>
