Abstract (en)  
[origin: EP0618142A2] The container has a first container part (26), having the length (L1) and an opening, furthermore a second container part (8) having the length (L3), which parts are connected to one another by means of a foldable wall part (6) having the length (L2). The diameter (D1) of the first container part (2) is smaller than the diameter (D2) of the second container part (8). Adjoining the second container part (8) at the bottom is a second foldable wall part (10) on which a third container part (12) is arranged, which contains a bottom (14) and which has, at the upper end, a larger or smaller diameter (D3) than the second container part (8). The lengths (L4, L5) of the second wall part (10) and of the third container part (12) are such that the second container part (8) can be fitted in or over the third container part (12), with the second wall part (10) being folded in. This results in a container which is particularly sturdy and facilitates writing (printing, labelling) and handling. <IMAGE>
