Abstract (en)

[origin: EP0618150A2] 2.1. To increase the load-bearing capacity of packages made of thin packaging material, for example paper, a blank for an outer wrapping (14) is provided with localised reinforcements, namely reinforcing strips 15, 16, 17, 18, for example, which are arranged spaced-apart and parallel to one another, preferably on the inner side of the blank and are connected to the latter. 2.2. In the case of outer wrappings (14) having cutouts (19) for applying tax stamps, etc., to the wrapped cigarette packages (10), the reinforcing strips (15..18) extend in such a way that transverse webs (22) formed between the cutouts (19) each have one reinforcement. <IMAGE>
