Abstract (en)
[origin: EP0618267A1] A resin composition which is appropriate for use in external parts for automobiles which has improved resistance to yellowing due to light without loss of the superior characteristics of PPE/PA resins contains D) 0-50 parts by weight rubber polymer with respect to 100 parts by weight of a composition comprising : A) 10-35 wt% of a polyphenylene ether resin, B) 36-65 wt% of a polyamide resin and C) 5-29 wt% of a styrene thermoplastic resin, and E) 2-20 parts by weight of pigment with respect to 100 parts by weight of the total of (A)-(D), where said resin composition constitutes a particulate dispersion of (A) in (B), with (C), (D) and (E) being essentially dispersed in (A).
