Abstract (en)

[origin: EP0618322A1] For simplification of known column kits for the anti-tip security fixation of two superposed household machines 1 and 3, it is proposed that the kit contain four simple foot plates 6 in exchange for the standing feet, a device 7 to 10, 12 and 13 for securing the rear bottom edge of the machine 3 mounted on top against lifting off from the worktop 2 and an arrangement 11, 14 to 17 for securing the front bottom edge of the machine 3 mounted on top against movements in the direction of the front side of the machines. On the one hand, the housings of the superposed machines are thereby located so close one above the other that front and side panels for concealing the gap between the worktop 2 and the housing of the machine 3 mounted on top can thus be dispensed with, and on the other hand the kit is reduced to a minimum in terms of the parts required. The assembly of such a kit is thus simplified to such a degree that technically inexperienced people are able to carry out the assembly independently. <IMAGE>
