Abstract (en)
[origin: FR2701737A1] Positive-displacement machine including a piston (1) situated in a capsule (2). The piston has a hypetrochoid profile as well as the internal recess (3) of the capsule. The piston has n axes of symmetry and the capsule has n + 1. Inside the capsule, the piston accomplishes a planetary movement about the axis DELTA c of the capsule. In order to obtain this planetary movement, the piston is, on the one hand, mounted so that it can rotate freely on a wrist pin (4) which is off-centred relative to a carrying shaft (7) coaxial with the axis DELTA c of the capsule, the shaft (7) being driven in rotation and, on the other hand, the surface of the piston and the internal surface of the recess (3) of the capsule (2) are equipped with permanent magnets (12, 13) creating magnetic repulsion forces. <IMAGE>
