Abstract (en)
A multi-cartridge shooting gun device includes a magazine (12) with a central hole (16) engaging a supporting shaft (18) extending from a gun housing (11). The magazine has a plurality of magazine holds (17) disposed around the axis, each for receiving a cartridge (14). A spring (15) is disposed in each cartridge hole (17) for being compressed between the magazine (12) and the respective cartridge (14). When a cartridge (14) is actuated by a trigger (41) the resilience of the spring (15) will assist shooting the cartridge (14) towards the target. <IMAGE>
