Abstract (en)

[origin: WO9412354A1] A device for stapling superposed printed products laid on a conveyor (8) with successive spaced supports (4), leads past a stapling machine (5) with a plurality of rotating stapling heads (10) operating in synchronism with the supports (4), whereby the rotary paths (13, 14) of the oppositely arranged stapling heads (10) and the supports (4) form a common section (B, D) in the region where they are closest together on which the stapling heads (10) or the supports (4) are deflected from the predetermined rotary path (13, 14).
