Abstract (en)

[origin: WO9312310A1] A device for covering an aperture in a wall surfaced with tiles or plates has a holder (7) for a permanent magnet (8) co-operating with a ferromagnetic component fitted on the inside of a tile or plate-surfaced cover concealing the aperture. The holder (7) is fitted beyond a predetermined breaking point (12) with an attachment with a threaded bolt (6) which can be screwed into the threaded hole (5) of a frame surrounding the aperture to be covered. After the attachment has been separated along the breaking point (12), the holder (7) may be secured to an anchor securable in the wall which has a flat section insertable into a slot (15) in the holder (7).
