Abstract (en)

[origin: EP0619086A1] This is a box comprising a case (4) with its lid (6) with hinge (20, 22), means (14, 30, 58) for controlling the opening of the lid (6), and means (62, 64, 66, 68) for damping the opening movement of the said lid, these means comprising at least one substantially elastically compressible means (62, 64), such as a block of foam and/or a flexing spring, arranged in the box to act during the essential part of the opening travel of the lid by absorbing the energy communicated to the latter in order for it to open. Application, in particular, to powder compacts or make-up boxes. <IMAGE>
