Abstract (en)

[origin: EP0619091A2] At least one end of the holder bar (1) has an axially protruding coupling rod (4) of smaller cross-section and movable and fixable axially in relation to the holder bar. The coupling rod free end protruding beyond the holder bar has couplings, in the form of an external thread, or a smooth plug or clamping part, joining it to an adjacent bar and/or support (3) or wall attachment. A threaded sleeve (5) inside the holder bar has an inner opening matching the coupling rod outer section. A clamping, grub screw (6) fixes the holder bar to the coupling rod which goes through a hole (9) in a radially inner part of a cap (8) covering the holder bar end.
