Abstract (en)

[origin: EP0619107A1] A U-shaped external frame (18) and a rectangular internal frame (14) form the guide frame for a lifting plate (24) of a lifter. The two frames (14, 18) are each integrally manufactured from a glass fibre-reinforced plastic and have rail-guided sliding joints (20) which are integrally formed. The sliding joints (20) are formed on hook-shaped projections (38) of the long legs (28, 32) of the frames (14, 18). In the low position of the lifting plate (24) the sliding joints essentially lie below the contour of the external frame (18) or above the contour of the internal frame (14). <IMAGE>
