Abstract (en)
A reversible blind having slats (2, 2a) which may be rolled up on a drum; guides (12) for conventional unrolling of the blind and guides (14) for reversed unrolling; a tile (32) which may rotate and is fixedly attached to fixing discs (34); a clutch associating the tile (32) with the drum (6). In one position of the clutch, the tile (32) and drum (6) rotate and the slats are rolled up; in another position, the tile (32) is locked at the top and the blind moves from the guides (12) to the guides (14), being reversed. The clutch comprises: a ring member (38) attached to the drum (6) and having axial bores (40); axial orifices (42) of the fixing disc (34) which may be aligned with the bores (40); a free disc (44) having an eye (46) and axial pins (48) passing through the orifices (42) and insertable in the bores (40); and a pin (50). Alternatively, the pins (48) are out of or in the bores (40) and the pin (50) is engaged in or disengaged from the eye (46). <IMAGE>
