Abstract (en)
[origin: EP0620030A2] The automatic ski-binding has the heel-holder for the ski-boot (4) joined off-centre to the binding unit (3). Thus the lengthwise axis (1) of the holder diverges to the side (5) from that (2) of the binding unit. This divergence can be adjustable and lockable. It can be determined by the wall thickness of the holder, or the latter can be inclined to the axis (2).
