Abstract (en)

[origin: EP0620063A1] In an installation for producing a steel strip by deforming a continuously cast steel slab (5), consisting of a continuous-casting machine with an oscillating continuous-casting mould (1) having cool walls and with a deformation device (2) for the steel slab arranged at the mould outlet and having deformation rollers, surface defects in the steel slab due to a slag-removal and descaling device associated with the deformation rollers (3, 4) can be avoided if spray nozzles (7) on the side facing away from the slab (5) are directed at the deformation rollers (3, 4). <IMAGE>
