Abstract (en)

An activated-carbon solvent treatment unit for dry-cleaning machines with improved regeneration unit which comprises a cylindrical container (2) with a vertical axis that extends vertically and has a convex hood (7) and base (6); the container (2) is internally provided with a deflector (10) that forms an activated-carbon containment compartment (11) in an upward region and, in a downward region, a water containment compartment (12) which contains heating elements (13) that are suitable to generate steam for flushing the carbon; said upward region and said lower region of said container (2) are connected by a flushing water return duct (14) that includes a condensation unit (15) and a water-solvent separator (16). <IMAGE>
