Abstract (en)  
A device for preventing the opening of a door (1) by brute force comprises two blocks (4,5) to be mounted opposite one another on the door (1) and door frame (2). The block (4) on the door having a concave face (4a,b) matching a convex face (5a,5b) on the block (5) on the door frame. The door may be swung open normally but lateral displacement of the door out of the frame is limited by the blocks. Interlocking teeth may be provided on the blocks. <IMAGE>
