Abstract (en)

[origin: WO9324893A1] A programmable infusion pump (10) can be configured to operate in one of several operational modes (i.e. BASAL, PCA, BASAL and PCA, etc.). The pump (10) is provided with an erasable, preferably non-volatile memory (34) for holding information designating one of the modes. The end user can set up the pump (10) easily and expeditiously for the designated mode, since the other, non-designated modes are made invisible.
