Abstract (en)

[origin: EP0621370A1] To make a ballastless track superstructure, an asphalt carrier layer 3 is applied to a substructure 2 consisting of concrete and sleepers 5 having a central recess 4 on their underside are laid on this asphalt carrier layer 3. In order to secure the sleepers 5 against transverse forces and in order to guarantee a wear-free anchoring of accurate fit, the sleepers 5 have a central bore 8 and the substructure has a blind bore 9. An adhesive is introduced into the blind bore 9 and a dowel 13, which is guided through a sliding and spacer bush 11 inserted into the sleeper bore 8, is then inserted into this blind bore 9. <IMAGE>
