Abstract (en)

[origin: EP0621376A1] A road-cleaning vehicle has a pivotably mounted sweepings container (4) which has a sweepings inlet (17) connected to a suction nozzle on the road surface and an outlet (21) for the suction air of a suction blower (15). As a result of the fact that the suction opening (16) of the suction blower (15) is mounted in the cover (6) of the sweepings container (4) turned away from the accumulated sweepings (18) and directed upwards, an improved separation of the swept material (13) from the air sucked in through a pipe (10) is achieved. <IMAGE>
