Abstract (en)  
[origin: EP0621617A1] The circuit breaker (1) contains a housing body which is in the form of a box and can be installed in a switch cabinet. A switching lever (5) and an additional device (4), which can be passed to the outside through a door of the switch cabinet, are arranged on the front of the housing body. On the front, the housing body has a size which is defined by a flat bearing surface (6), from which the switching lever (5) projects. The additional device (4) has a flat rear, which corresponds with the bearing surface (6) and with an opening (3) in the switch cabinet door. Fastening means are furthermore provided with whose aid the additional device (4,19,22,25,27) or a further additional device (19,22,25,27), which can be exchanged with it, can be fixed on the bearing surface (6). <IMAGE>
