Abstract (en)
[origin: EP0622065A1] For a bathing aid which comprises a seat which can be hydraulically lowered and raised in a bath tub and pivoted out of the bath tub, it is provided, as a simple, space-saving design, that a column (3) of hydraulic cylinders (5, 6, 7) which can be telescopically moved inside one another and are solely actuated by the pressure of tap water be firmly mounted on the ground to the sides next to the top of the bath tub (2), and that a side-arm (9) which can be pivoted about at least 90° be fastened with low friction on the top (8) of the uppermost hydraulic cylinder (7). The seat (10) with its back rest is hinged on the free end of the side-arm. <IMAGE>
