Abstract (en)
[origin: EP0622494A2] The support carriers (16) firmly connected to an edge lamella (11) in the edge construction (15) are located exclusively via at least one spring component (17). All spring components (17) of such a locating position are on all sides firmly attached to a common coupling piece (16) releasably fixed to the support carrier (16). The spring components (17) of a locating position are firmly fitted to a common connecting component (19) which is releasably connected to the edge construction (15). The spring components are formed as elastomer bearings (17), and are vulcanised to the coupling piece (18). The coupling piece (18), elastomer bearing (17) and connecting component (18) are vulcanised in one piece.
