Abstract (en)

[origin: EP0622769A1] The invention relates to a portable box (1) intended to inform the users of an omnibus network of the waiting times for omnibuses at the various stops of this network. Simple actuations of keys (3, 4, 5), translated by appropriate displays on a screen (2) of the box, make it possible to store several bus journeys in this box, which terminate respectively at predetermined stops of the network, and simply pressing on a button (6 or 7) allows selective display on the said screen of any one of the stored journeys, with visual information on the waiting times for buses at the stop at which this journey terminates. <IMAGE>
