Abstract (en)  
[origin: EP0623305A1] A vacuum cleaner dust bag has a substantially plate-shaped connection piece (4) with a fixed, two-layer base body and a closure slide (6) displaceable between the two base-body layers (7, 8). The base-body layers (7, 8) contain aligned passage openings (9, 10) and the closure slide (6) contains a through-opening (11) which coincides with the passage openings (9, 10) in the open position of the closure slide (6). In the closed position, the closure slide (6) closes the passage openings (9, 10). The base body has at least one stop element (21) which engages in a stop cutout (20) of the closure slide (6), the edge of the stop cutout (20) forming, at least in the closed position of the closure slide (6), a limit stop (23) which bears against the stop element (21). <IMAGE>
