Abstract (en)  
[origin: EP0623715A1] The present invention relates to a scaffolding with adjustable base width, in the case of which horizontal crossmembers (3), assuming a mutual distance from one another, are connected to one another by an access platform. Vertical scaffolding frames (2) with horizontal working platforms are arranged on the crossmembers (3) and connected to the crossmembers. In order to be able to change the base width in a simple and operationally reliable manner with low production costs, it is proposed to fit an extension arm (8) at the free ends of the crossmembers (3) by means of a coupling fitting (7), an adjustment foot (5') being fitted on said extension arm.
