Abstract (en)

Method for covering the facades of building with glass panels. Said panels (1) consist of a pane of glass (101) and a frame of metal sections (105), which frame possesses, on the side nearest the glass pane (101), a ceramic-coated or glazed metal insert, the glass pane (101) being joined to said insert by means of a strip of suitable mastic (3), for example structural silicone. The resulting composite panel (1) is secured to the supporting structure (5) of the building facade by the mechanical fixing of the edges (205) of the frame to a section (6) belonging to said supporting structure (5). <IMAGE>
