Abstract (en)

[origin: EP0623781A1] A lighting or signalling device for a motor vehicle, comprising a base (10) carrying a lamp which emits a light beam outwards, a glass (lens) closing a front opening of the base, an intermediate screen (20) which can be engaged in the base via its front opening and means (11, 12, 21) for holding the intermediate screen in the base. According to the invention, the said holding means comprise, on the one hand, means (11, 12) which form rear stops and are provided inside the base, on which at least one edge of the intermediate screen is supported and, on the other hand, a retention tab (21) located towards the front of the intermediate screen, which extends towards the front opening of the said base from one edge of the screen and interacts by elastic snap-fastening with an arrangement inside the said base. <IMAGE>
