Abstract (en)

[origin: EP0473562A1] The device provides for a thrust member (30, 130, 90) mounted between the body (10)/support (12, 112) assembly of the plug (8) and the casing of the socket (70) which exerts an axial force enabling them to execute an axial relative movement and an actuating element (50, 150, 100) interacting with the said thrust member (30, 90) such that the actuation of the said actuating element (50, 150, 100) ensures the said axial relative movement and therefore the extraction of the conductor pins (18) of the plug (8) from the socket-terminal bushes or grippers (72) of the socket (70). The extraction device may be mounted either on sockets (70) or on plugs (8) of standard type. <IMAGE>
