Abstract (en)  
[origin: EP0625619A1] The invention relates to a scaffolding platform, in the case of which there are arranged at its two lateral ends, on the wall side, devices for fastening the platform on the wall and two outer supports which extend downwards from the plane of the platform and run on the wall of the structure. The invention consists in the fact that, between the supports (2) and at a distance beneath the horizontal plane defined by the fastening devices (7), provision is made for at least one device (19) for arranging a stop (20) which, in the operating position, projects at right angles with respect to the plane of the wall. <IMAGE>
