Abstract (en)

[origin: EP0625621A1] The invention relates to a method for laying concrete slabs by applying free-flowing or moist concrete onto a backing layer, for example a sand or gravel layer. The method is characterised in that the temperature of the heating concrete is kept at approximately the same level as the temperature of the backing layer by increasing the heat dissipation in the direction of the backing layer by raising the thermal conductivity and/or the temperature of the backing-layer flow-off surface (A) which is available for the heat dissipation (Q) is kept at approximately the same level as the temperature of the backing layer.
