Abstract (en)

[origin: EP0626493A2] A door opener with a pivotable latch, for installation into a door frame in which a door, in its closed position, butts, by way of a safety bolt, against a locking surface of the latch in order to fix the position of the door in the door frame. Said door opener is distinguished in that the latch exhibits a basic latch body and at least one adaption element, in that the locking surface is formed on the adaption element, in that the adaption element can be connected to the basic latch body, and in that the adaption element, for adjustment of the door in the closed position, has a predeterminable thickness. <IMAGE>
