Abstract (en)
[origin: WO9316096A1] The present invention concerns the cloning and sequencing of DNA corresponding to the GA1 locus of *A. thaliana* which encodes ent-kaurene synthetase, to vectors containing said DNA, to vectors capable of expressing said DNA, and to hosts transformed with said vectors. The invention further concerns the use of the GA1 gene, and regulatory regions thereof, in the generation of chimeric and transgenic plants.
