Abstract (en)  
[origin: WO9317209A1] A door check for vehicles comprises a housing (1) which houses a restraining mechanism (7) for applying a frictional restraining force to a strap (4) acting as the check. The housing (1) comprises a first component (10) for attachment to a door (2), a second component (11) in the form of a block, and locking means for securing the two components together. One of the components, preferably of metal, is of channel section having side flanges (17), and the other component, which is preferably of synthetic plastics, has side edges received between the flanges.
