Abstract (en)
[origin: WO9415054A1] The invention concerns a drive for a curved sliding door in which a left-hand (3) and right-hand (1) door are moved by means of two motor-driven straps (4, 2). One end of each strap is attached to the front or rear edge of the other door, the strap passing round a guide roller (6, 8) located in the middle between the two doors, thus linking the doors so that when one moves the other is forced to move with it in the opposite direction.
