Abstract (en)
[origin: EP0627370A1] At least two locking elements (12,14), shaped as flat, quarter-circle-shaped plates, are fixed next to each other on a lifting truck (50). The movement of the first locking element (12) is transmitted in the opposite direction to the second locking element (14). The locking elements fit from different sides into the holder element (30) to which they are tightly joined in a locking position. The transmission elements are in the form of outward-pointing teeth (24) on the locking elements, which each rotate on their own axle (15,16).
