Abstract (en)
Granular detergent components or compositions having a bulk density of at least 600 g/l comprise: i) a granular component which comprises smectite clay; and ii) a finely divided particulate material wherein the finely divided particulate material is present at a level of from 0.5% to 15% by weight of the detergent component or composition and that the finely divided particulate material comprises sodium aluminosilicate and hydrophobic silica wherein the ratio of the sodium aluminosilicate to hydrophobic silica in component ii) is from 100:1 to 5:1. A process for making suitable granular detergent components and compositions is also described.
