Abstract (en)
[origin: EP0627531A1] The invention relates to a support element (20, 48) having an opening on one side for a building element, of which the support is enclosed by an insulating means (3) which has an essentially sound-insulating effect and comprises panels (8, 22, 32, 33). In the case of said support element, the invention provides that at least the top panel (8) of the outer shell (1) is provided with at least one reinforcement element (2, 29) and is connected thereto in a load-transferring manner and is arranged such that it follows the deflection curve between the two rising wall panels (32, 33). <IMAGE>
