Abstract (en)

The invention relates to a system (10) for controlling and/or recording and/or indicating of elapsed time and/or of events following one another in the time. The system (10) comprises a unit (10) suitable for receiving and recording data coming from a first suitable carrier (12), for processing said data and for presenting them in a displayed and/or recorded form on a second suitable carrier (16), said unit (10) comprising at least one reading device (14, 15) for reading the data recorded on said first carrier (12), a clock circuit giving a signal of elapsed time. According to the invention, the system comprises an electronic circuit suitable for processing the data detected on said first carrier, for associating them to the signals coming from said clock circuit and to record them on said second carrier (16), and in that said unit (10) is completely autonomous and fed by a suitable battery.
