Abstract (en)

The invention relates to a casing comprising a U-shaped bottom (20) nested with a lid (1) of the same shape. Stop means between these two parts are provided at the two ends of the casing. In particular, at one end where the lid extends beyond the bottom, these stop means comprise a protrusion (12) carried by a side face (3) of the lid and extending parallel with a front face (22) of the bottom. The invention also relates to a special method of making this casing. <IMAGE>
