Abstract (en)

A dispensing receptacle for machine washing of clothes by means of a detergent in the form of tablets which are placed in the interior of the receptacle prior to placing the latter in the drum of the washing machine and the washing process is started, said receptacle comprising a flexible liquid permeable sleeve (2) arranged in an enclosing manner about a comparatively rigid hollow body (1) to form an annular chamber (3) between the body and the sleeve (2). The body (1) has an inlet opening (5) for inserting a tablet (7) into the interior of the body and means for transferring the tablet from the interior of the body to the annular chamber (3). The transfer means comprises a transfer slot (6) formed in the lateral wall of the tubular body (1). Adjacent to the slot (6) a transversal wall (4) is provided in the interior of the tubular body (1). The dispensing receptacle according to the invention is easy to use and ensures a fast and efficient disintegration of the tablets inserted therein. <IMAGE>
