Abstract (en)

Floor element (1) made of PE or PP for cavity floors, comprising a plate (2) and a series of supporting columns (3) formed as a whole therewith, said supporting columns (3) being self-leveling. The angular plate is provided with stiffening means (13, 14, 15, 16) and is furthermore formed on the edges with trapezoidal channels (4, 5, 6, 7). The channels (4, 5) of the two connecting sides are somewhat wider and deeper than the channels (6, 7) of the other two connecting sides, in order to provide a labyrinth sealing against mortar leakage. <IMAGE>
