Abstract (en)
The latch has a cover-plate fixed to the door etc., and which has top and bottom parts with a bore through them. The bottom part contains a guide bush in which the latch guide turns, this being secured by a circlip engaging in a peripheral groove. On the end (3) of the bush (2) protruding from the bottom part (1) is a covering rosette (4). The latter can have a locking bead (5) on the inside and engaging in a groove (6) in the outside of the bush, and it can also have an external protruding edge (7). The rosette can be of plastic, high-grade steel, or non-ferrous metal such as brass or bronze. Its other edge (13) can have a spring effect, being inclined to the axis of the catch neck (9).

Abstract (de)
Die Erfindung betrifft eine Drückeranordnung, bei der das axiale Spiel durch eine Ausgleichsrosette, welche auf eine Führungsbuchse gedrückt wird, ausgeglichen wird. <IMAGE>
