Abstract (en)

[origin: EP0628688A2] A bearing part, serving preferably as a bearing part (1) on a fixed frame, of a bearing for the at least pivotable mounting of a sash/leaf, of a window, of a door or the like on a fixed frame or a second sash/leaf is provided with three bearing eyelets (5, 6, 7) which are preferably arranged at the same distance from one another. Moreover, it has two fastening extensions (15, 16) on the rear side of its basic body (4). Located on the third or central bearing eyelet (7) is a securing device (19) for a bearing bolt (3) which is plugged into all the bearing eyelets. Pivoting a securing member (20) of the securing device (19), of which the two arresting extensions (24, 25) engage into an assigned annular groove (27) of the bearing bolt (3), achieves a reliable connection of said bearing part to a second bearing part (2) via the bearing bolt (3). <IMAGE>
