Abstract (en)

[origin: EP0628692A2] In order to be able to use a bearing element of an upper pivot bearing for an at least pivotable or for a pivotable and tiltable sash/leaf of a window, of a door or the like, for right-hand attachment and for left-hand attachment of the sash/leaf, the rebate band (3) thereof is mounted, such that it can pivot about a geometrical axis (4), on the vertical retaining arm (5) of the bearing element and, with respect to the latter, can assume two operating positions which are offset through 180°. These are secured, according to the invention, with the aid of a latching device which comprises in each case one through-passage (16 or 17) and a latching member (18) which is retained, such that it can be deflected resiliently, on the vertical retaining arm (5), but, in particular, on the pivot pin (7). <IMAGE>
