Abstract (en)

[origin: EP0628693A2] In order to be able to mount a corner angle (1), which is inserted into a fitting-part groove (12, 13), with the aid of fastening screws (24), which are screwed into the groove base (11), said screws being subjected to the lowest possible degree of loading, the end regions (7, 8) of the angle legs (5, 6) of the corner angle (1) are bent around inwards through approximately 180° such that the free end (21, 22) of the bent-over region (7, 8) runs approximately parallel to the non-deformed part of its angle leg (5, 6) and can be supported on the groove base. Coaxially provided through-passage bores (23 and 25) make it possible to screw the angle fixedly at its bent-over regions (7, 8), with the result that the fastening screw is in each case subjected only to shearing loading. <IMAGE>
