Abstract (en)  
The present invention provides an image forming apparatus comprising image forming means for forming a toner image on a recording material at a recording position, convey means having a recording material bearing member for bearing the recording material for conveying the recording material to the recording position, first cleaning means having a brush-shaped cleaning member slidably contacted with a surface of the recording material bearing member for cleaning the surface of the recording material bearing member, and second cleaning means having an oil absorber member abutted against the surface of the recording material bearing member for cleaning the surface of the recording material bearing member. The oil absorber member is abutted against the surface of the recording material bearing member at a side opposite to a side where the toner is scattered due to the sliding contact between the brush-shaped cleaning member and the surface of the recording material bearing member.
