Abstract (en)

[origin: EP0629510A1] The present invention provides an image receiving material containing on a support an image receiving layer having as a principal component the hardened product of (i) a vinylchloride-based resin containing active hydrogens, (ii) an aliphatic polyisocyanate having 3 isocyanate groups as specified in the claims and (iii) a polydialkylsiloxane containing active hydrogens. The present invention further relates to a method for making an image receiving element and to a method for obtaining images therewith.
