Abstract (en)

A device 10 for pressing objects 14, for example tablets or capsules, from receptacles 13 in a blister pack has a lower portion 21 for resting on a support and an upper portion 24 hinged at 25 and including a channel 32 for guiding one side of a blister pack which rests on a rib 33. If a tab 28 is pressed down a boss 30 pushes the object through the sheet 11 of the pack into an open-topped receiver section defined by wall 27. The device 10 can then be moved to transfer the object 14 to a user's mouth. The device may be useful for the elderly. <IMAGE>
