Abstract (en)

Herein is described an apparatus (10) for the sewing and finishing of tie tips and the use of same through the use of properly modified and integrated sewing machines. The apparatus comprises a base (12) and a cover (40), each of similar form to the tie tip. The fabrics to be sewn are positioned between the base (12) and said cover (40) and, by means of a lever (80) system, instruments of friction (56, 58) are shifted, properly placed on the cover, which pull the upper fabric and take it to assume a configuration which allows for the sewing through an appropriate sewing slot. Said apparatus (10) permits an easier positioning of the fabrics, the possibility to regulate the sewing rim in a different way along the sides of the tip and along the flanks and the possibility of use in an automated work circuit. <IMAGE>
